

Appl. No. 10/081,815
Reply to Office Action of February 24, 2005

Please amend the Specification according to the following marked up paragraphs.

Please amend the bottom carryover paragraph beginning on p. 2 as follows:

5 In particular, the superimposition of visualized measured results makes it possible to combine the intensities of different measuring devices/measuring methods. For example, a tumor identified with a measuring method of x-ray diagnostics could be combined ~~mixed~~ into a visualized measured result produced by a measuring method of magnetic resonance tomography.

10

Please amend the first full paragraph on p. 14 as follows:

As shown in Fig. 1, a first landmark A1 is defined in a first visualized medical measured result A ("measured result 1") in a first step S1. It is advantageous when the landmarks are defined at characteristic locations of the
15 test subject M imaged in the measured result A.

Please amend the first paragraph on p. 15 as follows:

In this second visualized medical measured result B ("measured result 2"), a first landmark B1 is defined in Step S5. It is also advantageous when the
20 landmarks are defined at characteristic locations of the test subject M imaged in the measured result B.
